

County Expressway Planning Study

The Comprehensive County Expressway Planning Study will serve as a long-range strategic plan for the improvement and maintenance of the expressways. Appropriate goals for each expressway will be developed based on the expressway's unique characteristics and community needs. The study's documentation will include identification of alternatives, measures of effectiveness, a record of local preferences, operational and maintenance policies, funding strategies, and improvement priorities. The final product will be a long-range Implementation Plan that details the policies, priorities, and funding strategy for the expressway system.

On August 19, 2003, the Board accepted the study and directed administration to forward the Implementation Plan to Valley Transportation Authority (VTA) to be included in the Valley Transportation Plan 2020 (VTP2020) now the VTP 2030 that was adopted in February, 2005. This plan was also submitted to MTC to include it in the Regional Transportation plan (T2030)

The VTP 2030 is a long-range transportation plan, not a programming document. The plan provides the range of options available to explore and move forward with. This plan does not set any priorities or time schedules for the included projects to be implemented but establishes the framework for the VTA Board on key transportation investment decisions.
